Education

Stanford University   **Stanford**

Ph.D candidate in Mechanical Engineering, Specialization in Robotics, Optimization and AI.   *2019–Present*

Co-advised by Zachary Manchester & Mac Schwager, my research focuses on developing fast optimization algorithms for simulation, planning, and control for robotic systems. I am designing and implementing a differentiable physics simulator and leveraging this tool for trajectory tracking [1, 2, 3, 4], trajectory optimization and reinforcement learning tasks in robotic locomotion and manipulation. Previously, I implemented optimization algorithms enabling game-theoretic reasoning for autonomous vehicles [6,7,9].

Stanford University   **Stanford**

Master of Mechanical Engineering, Specialization in Robotics and AI.   *2017–2019*

GPA – 4.0/4.0

Coursework: Machine Learning, Convolutional Neural Network for Visual Recognition, Robotic Manipulation, Robotic Autonomy, Convex Optimization, Optimal Control, State Estimation, Aerial Robot Design.

Ecole Centrale Paris   **Paris**

Master of Science in Engineering, Applied Mathematics.   *2015–2017*

GPA – 4.2/4.0, ranked 4th out of 535 students.

Coursework: Statistics, Probability, Discrete Optimization, Embedded Systems, Control Theory, Parallel Computing, Database.

Experience

Research Scientist, Boston Dynamics AI Institute   **Cambridge, MA**

Focused on developing new whole-body manipulation capabilities   *June 2023 - Present*

○ Synthesize contact-rich policies via robot learning methods, optimization

Robotics Research Internship, Google Brain   **New York**

Developed optimization-based tools for contact simulation and long-horizon planning.   *Summer 2022*

○ Unified collision detection and contact dynamics as a single optimization problem.

○ Implemented an interior-point solver for non-linear complementarity problems to simulate and differentiate contact dynamics.

Robotic Autonomy Project, Stanford University   **Stanford**

Implemented a robotic autonomy stack on a TurtleBot using ROS.   *Fall 2019*

○ Implemented a deep learning inference pipeline on board to detect and classify objects using camera input.

○ Exploited LIDAR data to build a map of an unknown environment, then planned trajectories online to reach goal points.

○ Designed an actuator controller to execute the planned trajectories.

Software Engineering Internship, Aurora Innovation   **Palo Alto**

Involved in autonomous driving technology development as part of the motion planning team.   *Summer 2018*

○ Developed a learning-based approach to improve the interaction of the autonomous vehicle with pedestrians and cyclists.

○ Designed classification features and built a pedestrian interaction dataset from autonomous vehicle logs.

○ Designed, trained and tested a deep learning model to take decision with respect to pedestrians.

Research Assistant, Stanford AI Lab   **Stanford**

Programming a deep learning application in robotics.   *Winter 2018*

○ Designed a Recurrent Neural Network for estimating an object's physical properties through contact interaction.

○ Implemented a probabilistic filter to fuse sensory data containing images and force/torque measurements.

Software

Silico: Single-level Differentiable Contact Simulation.   **New York City**

Introduced a formulation unifying collision detection and contact dynamics as a single problem.   *2022*

https://github.com/simon-lc/Silico.jl

Dojo: Differentiable Physics Engine for Robotics.   **Stanford**

Developed a state-of-the-art physics engine for rigid-body contact simulation   *2022*

https://github.com/dojo-sim/Dojo.jl

ALGAMES: Software Package for solving dynamic games. **Stanford**
Implemented a state-of-the-art solver for constrained dynamic game *2020*
`https://github.com/RoboticExplorationLab/Algames.jl`

Skills

Programming: PYTHON, C++

AI & Robotics: PYTORCH, ISAAC GYM, MUJOCO, ROS2, IPOPT, CVX

Software & Tools: GIT, LINUX, DOCKER, BAZEL, LATEX

Language: English (bilingual), French (native), Spanish (Conversational), German (basic skills)

Talks and Presentations

Control Through Contact via Differentiable Optimization (slides)
Advanced Mechanical Bipedal Experimental Robotics (AMBER) Laboratory, Caltech. *November 2023*

Single-Level Differentiable Contact Simulation (video) (slides) (poster)
International Conference on Intelligent Robots and Systems (IROS), Detroit. *October 2023*

Differentiable Physics Simulation of Dynamics-Augmented Neural Objects (video) (slides) (poster)
International Conference on Intelligent Robots and Systems (IROS), Detroit. *October 2023*

Towards Efficient Optimization Through Contact: Simulation, Gradients, and Algorithms (poster)
RSS Pioneers Workshop, Daegu, South Korea. *July 2023*

Numerical Optimization for Robotics Control and Simulation (slides)
The Boston Dynamics AI Institute, Cambridge, MA. *March 2023*

Dojo: Differentiable Physics Engine for Robotics (slides)
Skydio, San Mateo, CA. *March 2023*

Joint Prediction and Planning for Autonomous Vehicles (slides)
NVIDIA Autonomous Vehicle Research Group, Santa Clara, CA. *March 2023*

Numerical Optimization for Robotics Control and Simulation (slides)
Figure AI, Sunnyvale, CA. *March 2023*

Control Through Contact via Differentiable Optimization (slides)
Honda Research Institute (HRI), San Jose, CA. *February 2023*

Composable Optimization for Robotics Simulation and Control (slides)
PhD Defense, Stanford.   *January 2023*

Differentiable Physics: Simulation, Planning and Control (slides)
Toyota Research Institute (TRI), Los Altos, CA.   *November 2022*

Dynamics-Augmented Neural Objects (poster)
Bay Area Robotics Symposium, BARS 2022, University of California, Berkeley.   *November 2022*

Dojo: A Differentible Physics Engine for Robotics (slides) (poster)
Differentiable Physics for Robotics workshop, RSS 2022, New York City. (w/ T. Howell)   *July 2022*

Fast Contact-Implicit Model-Predictive Control (slides) (poster)
The Science of Bumping into Things workshop, RSS 2022, New York City. (w/ T. Howell)   *July 2022*

Leveraging Differentiable Physics for Contact-rich Robotic Control (slides)
Google Brain Robotics, New York City.   *August 2022*
National Institute for Research in Digital Science and Technology (INRIA) Willow Team, Paris. *June 2022*
Interactive Perception and Robot Learning Laboratory, Stanford University.   *May 2022*

NeRF-ysics: Dynamics-Augmented Neural Objects (poster)
Motion Planning with Implicit Neural Representations of Geometry workshop, ICRA 2022, Philadelphia.   *May 2022*

Dojo: A Differentiable Simulator for Robotics (slides)
Apple Research.   *August 2022*
Search-based Planning Laboratory, Carnegie Mellon University.   *August 2022*
Microsoft Research. (w/ T. Howell)   *May 2022*
Scientific Machine Learning (SciML) webinar, Carnegie Mellon University. (w/ T. Howell)   *April 2022*
SystemX lunch seminar, Stanford University. (w/ T. Howell)   *March 2022*

Contact-Implicit Model-Predictive Control (slides)
Machines in Motion Laboratory, New York University. (w/ T. Howell)   *December 2021*
Locomotion Seminar, Carnegie Mellon University. (w/ T. Howell)   *November 2021*

Linear Contact-Implicit Model-Predictive Control (poster)
Dynamic Walking 2021.   *May 2021*

ALGAMES: A Fast Solver for Constrained Dynamic Games (video)
Robotics: Science and Systems, RSS 2020.   *June 2020*

ALGAMES: A Fast Solver for Constrained Dynamic Games (poster)
Bay Area Robotics Symposium, BARS 2019, University of California, Berkeley.   *November 2019*

Teaching

Teaching Assistant, Stanford University   **Stanford**
CS231N: Convolutional Neural Networks for Visual Recognition taught by Fei-Fei Li.   *Spring 2019*
CS326: Topics in Advanced Robotic Manipulation taught by Jeannette Bohg.   *Fall 2018*
ME300B: Partial Differential Equations in Engineering taught by Sanjiva Lele.   *Winter 2017*

Awards

RSS Pioneers 2023: 1 of 30 selected as "the world's top early career researchers" in Robotics.
Walter-Zellidja Fellowship, received from the Académie Française, the most prestigious institution for the French language and culture, to support my studies in the United-States.

Professional Activities

Mentoring

John Tucker, currently PhD candidate at Stanford University.
Jan Brüdigam, currently PhD candidate at the Technical University of Munich.
Maks Sorokin, currently PhD candidate at the Georgia Tech.
Ali Abbas, currently PhD candidate at the Northeastern University.

Professional Service

Co-organizer, Workshop on Leveraging Models for Contact-Rich Manipulation, International Conference on Intelligent Robots and Systems (IROS), 2023.

Academic Reviewer

Conference on Robot Learning (CoRL): 2023
